

# Firevert – Documentation

## System Requirements

- WordPress: 6.0+
  - PHP: 7.4+
  - WooCommerce: 8.0+ (required)
  - Firevert latest version: 1.0.0
- 

## 1) Add the plugin

1. Log in to WordPress as an Administrator.
  2. Go to Plugins → Add New.
  3. Click Upload Plugin.
  4. Select Firevert ZIP file and click Install Now.
  5. After installation, click Activate.
- 

## 2) Activate and open settings

After activation, Firevert settings are available:

- In the WordPress sidebar: Firevert → Settings (top-level menu with icon).
- From the Plugins list: Plugins → Firevert → “Settings” link.

Direct URL: /wp-admin/admin.php?page=firevert

---

## 3) General

The General tab is empty in MVP. It is reserved for future global features.

---

## 4) Modules

Available modules (FREE):

- **Power Widget** - a universal promotional widget that can be placed in the corner of your store page. It can display text or an image, optionally with a countdown timer and a button linking to selected products. Works seamlessly on both desktop and mobile devices.
- **Promo Time Widget** - a promotional widget with a timer, designed to highlight time-limited offers with an optional coupon code. It can be placed in various locations on the product page and configured to appear only within a specified time frame.

- **Spectator Views** - a widget that shows the activity of other users in the store (how many customers are currently viewing a given product). It creates a social proof effect and increases interest in the offer.

For each module:

- Active checkbox – enables/disables the module.
- Save button – saves changes.
- Settings button – available when the module is active.

When you activate a module, Firevert automatically saves default configuration data in the database. This allows the module to work immediately and be adjusted later.

Deactivating a module keeps its data in the database. Removing the plugin deletes all data (including settings and CPT entries).

Recommendation: after enabling/disabling a module, refresh your cache (LiteSpeed, etc.).

---

## 5) Support

To report a bug or request support:

- Send an email to: [support@ilabs.com.pl](mailto:support@ilabs.com.pl)
  - Or fill out the form at: <https://firevert.com/>
- 

## 6) Partners and Services

This tab lists partners and services related to Firevert (e.g., SiteCare). It helps you explore recommended solutions.

---

## 7) Next steps

- Open the settings of activated modules and adjust them as needed.
  - Each FREE module has its own section later in this documentation (description and configuration).
- 

## 8) Modules Configuration

### Power Widget

#### Tabs

##### 1. Widget Settings

- Visibility for admin only – the widget is visible only to administrators.

- Widget display position – choose the corner of the screen where the widget will appear (bottom right / bottom left).
- Start date – date and time when the widget becomes visible.
- End date – date and time when the widget stops displaying.
- Display timer – shows a countdown timer inside the widget.
- Desktop – the widget is visible on desktop devices.
- Mobile – the widget is visible on mobile devices.
- Expand widget on mobile devices – the widget expands automatically on mobile.

## 2. Widget Appearance

- Widget type – choose between Text or Image.
- Widget text – text editor for content displayed in the widget.
- Widget image – option to select and preview an image (only visible when type = Image).
- Border radius (px) – defines the rounding of widget corners.
- Open button text – text displayed when the widget is collapsed.
- Close button text – text displayed when the widget is expanded.
- Color scheme:
  - Background
  - Primary color
  - Primary text color
  - Counter background
  - Counter text color
- Add shadow to widget – toggles the shadow effect.

## 3. Products

- Enable product list – enables or disables the product list inside the widget.
- Product selection mode – choose between All on sale or Selected.
- Product categories – add or remove categories from which products are taken.
- Selected products – manually pick products to be displayed in the list.
- Excluded categories – remove entire categories from the list.
- Excluded products – exclude specific products from the list.
- Product list button:
  - Enable button – shows an additional button below the list.
  - Button text – text displayed on the button.
  - Button link – destination URL for the button (e.g., category page, promotions).

Summary: These options allow the administrator to configure the look, content, and behavior of the Power Widget, highlighting selected products or promotions.

# Promo Time Widget

## Tabs

### 1. Widget Settings

- Name – the internal name of the widget.
- Coupon – coupon code linked to this promotion (defined in WooCommerce Coupons).
- Visibility for admin only – the widget is visible only to administrators.
- Widget display position – choose where on the product page the widget should appear, e.g.:
  - After the “Add to cart” button
  - Before the “Add to cart” form
  - Before the variations form
  - Before the “Add to cart” button
  - Before single variation
  - Before quantity field
  - After quantity field
  - After variations form
  - After the “Add to cart” form
  - Product meta start
  - Product meta end
  - After single product summary
- Display counter on widget – toggles a countdown timer inside the widget.
- Start date – date and time when the widget becomes visible.
- End date – date and time when the widget stops displaying.

### 2. Widget Appearance

- Background color – set the widget’s background color.
- Primary color – highlight color for main elements.
- Primary text color – text color for main content.
- Counter background – background color of the timer.
- Counter text color – text color of the timer.
- Border radius (px) – define corner rounding.
- Shadow – toggle shadow effect.

### 3. Products

- Enable for all products – apply widget globally to all products.
- Product categories – specify categories where the widget is active.
- Selected products – manually pick products for the widget.
- Excluded categories – exclude entire categories.
- Excluded products – exclude specific products.

Summary: Promo Time Widget allows you to run promotional timers with or without coupon codes, placed strategically on the product page. It helps draw attention to limited-time deals and increase urgency.

# Spectator Views

## Tabs

### 1. Widget Settings

- Visibility for admin only – the widget is visible only to administrators.
- Widget display position – choose where on the product page the widget should appear (same options as Promo Time Widget).

### 2. Widget Appearance

- Background color – set the widget's background color.
- Accent color – main accent color (e.g., highlight elements).
- Primary text color – main text color inside the widget.
- Add border – toggle border around the widget.
- Border color – select the border color (visible only if border is enabled).
- Border radius (px) – define the corner rounding of the widget.
- Add shadow – toggle shadow effect.

### 3. Products

- Enable for all products – widget will run globally for all products.
- Product categories – select categories for which the widget will be displayed.
- Selected products – manually pick products to be covered by the widget.
- Excluded categories – exclude entire product categories.
- Excluded products – exclude individual products.

Summary: Spectator Views lets you show in real time how many customers are viewing products, which supports sales by building trust and creating a sense of store activity.
